Applied Network Security

Bug Bounty Progress..

Register Number: MS19814766

Student Name: P.Anojithan

Subject: Applied Network Security

Course: M.Sc. Information Technology (Cyber Security)

Bug Bounty

To start up with bug bounty I have to learn basic HTML, java script, PHP and some C language. I created free accounts in Hack the Box, Hacker one and in Over the wire (Bandit). Also have a habit of learning from YouTube and forums.

Learned cracking the hidden secrets in "Over the Wire" and "Hacker one" so far. Keep on checking hacker news to get the update around the world.

Books I refer regarding hacking gave me a huge idea on basics, the most valuable one i prefer is "Web hacking 101", other than books I refer websites to specifically learn and understand each concept.

Below I uploaded my video link on how I managed to learn and test myself into hacking. Here i tried to find the hidden flags and uploaded that video as "hacker101" and completed up to phase 10 in over the wire.
